## New Look to ePM

As the accuracy and detail of the information has increased on the ePM screens the need for more space to display the information has become a problem. We now have the ability to increase the screen size to accommodate the demand for more information. You will begin to see larger screens as they are modified to handle the new fields. As an example here is the current and new ePM 300 screen with sample data.

Old - approximately 6 1/4" by 10" at resolution 1680 x 1050

New – approximately 7 ½" by 13 1/2" at resolution 1680 x 1050

On screens that have not been resized you will see more white space around the edges. Some notepads may require scrolling to see different areas of the new screens.
